

WlImporter

a small easy import tool

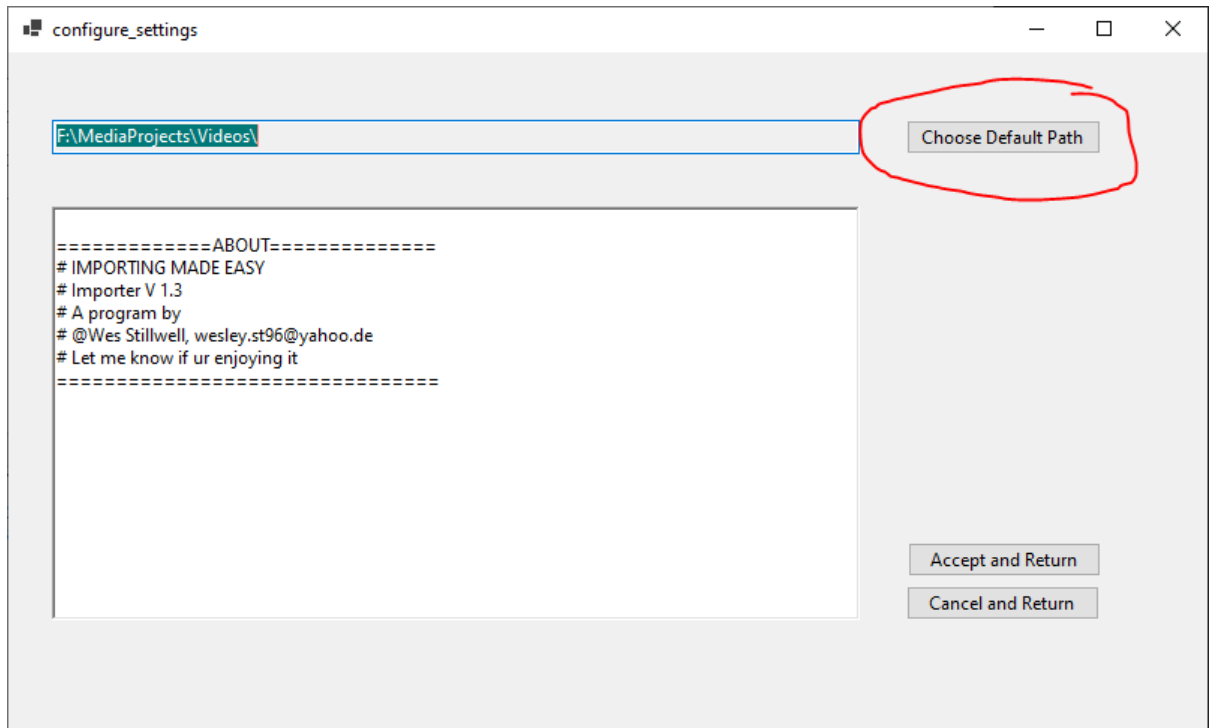

Setup

To use the import tool you can either Clone the Repository, if you wish to build it yourself, or just the `Importttool_(version).zip`. This Tutorial will assume the ZIP has been downloaded.

1. Extract the Zip File To Preferred Location
2. Launch `Importttool.exe`
3. Configuring Default Import Path
 - 3.1 . Click Configure Settings

- 3.2 Click Choose default Path

- 3.3 Click Accept and Return to apply setting

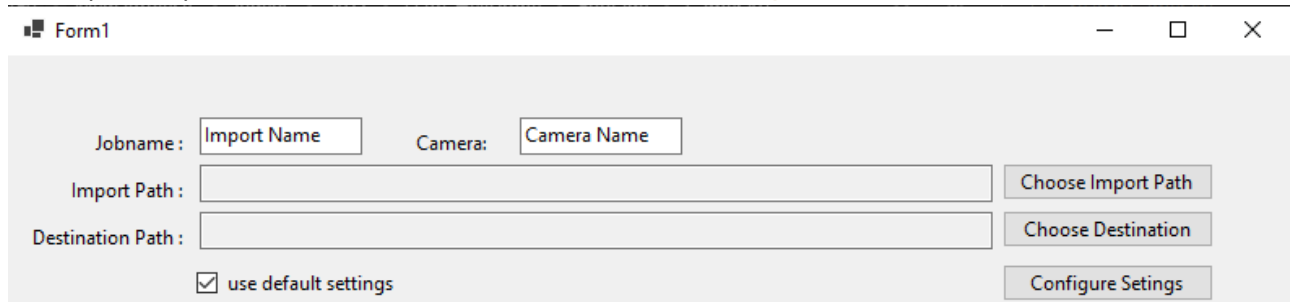

4. The Program has been set up

Usage

Set your **Jobname** to the name of the import job, this will be the name of the top-level folder. Set **Camera** to what Camera you are importing, eg: GOPRO, or Filmcamera1

Quick Import

1. For a quick import click the checkmark **use default settings**

2. Press **Choose Import Path** to the selected Location you want to import
3. Press **Start Import** button and it will copy files to the configured default Path

Custom Import

1. For a custom Flmport make sure **use default settings** is unchecked.
2. Press **Choose Import Path** to the selected Location you want to import
3. Press **Choos Destination** to select where your files need to go
4. Press **Start Import** button and it will copy files to the selected directory

Notes

- Program needs to be restarted for fresh import (it will close after accepting complete import message anyway)
- To add a 2nd camera to the Import-Job just relaunch the Programm and enter the same Jobname

About

IMPORTING MADE EASY

WImporter V 1.3
