

# WlImporter

*a small easy import tool*

## Setup

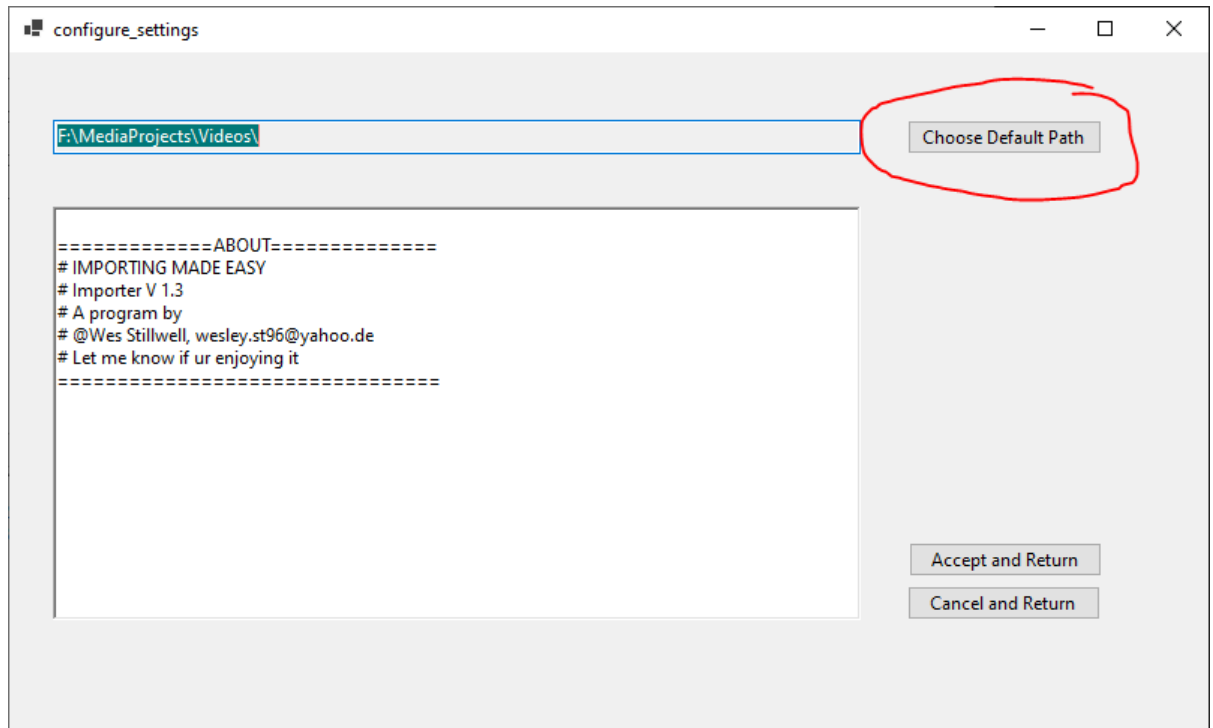

To use the import tool you can either Clone the Repository, if you wish to build it yourself, or just the `Importttool_(version).zip`. This Tutorial will assume the ZIP has been downloaded.

1. Extract the Zip File To Preferred Location
2. Launch `Importttool.exe`
3. Configuring Default Import Path
  - 3.1 . Click Configure Settings

The screenshot shows the WlImporter application window titled "Form1". It features a light gray background with several input fields and buttons. At the top, there are two text boxes labeled "Jobname:" and "Camera:". Below these are two larger text boxes labeled "Import Path:" and "Destination Path:". To the right of the "Import Path:" box is a button labeled "Choose Import Path". To the right of the "Destination Path:" box is a button labeled "Choose Destination". Below the "Destination Path:" box is a group of five checkboxes: "use default settings", "rename imported", "rename original", "auto backup", and "create Project". To the right of these checkboxes is a button labeled "Configure Settings", which is circled in red. At the bottom right of the main configuration area is a button labeled "Start Import". Below the configuration area is a large text area containing the following text: "[1] LOADING DEFAULT PATH :: -F:\MediaProjects\Videos\  
[2] JOBNAMe UNDEFINED  
[3] LOADING:Main.Class.ImportToolWindow".

- 3.2 Click Choose default Path

- 3.3 Click Accept and Return to apply setting

#### 4. Configure Premier Project

- 4.1 Click Configure Settings again
- 4.2 Next to *Default Premier Template* click the Choose Default Path button
- 4.3 Navigate to your Default Premiere Project you wish to also copy
- 4.4 Click Accept and Return to apply setting

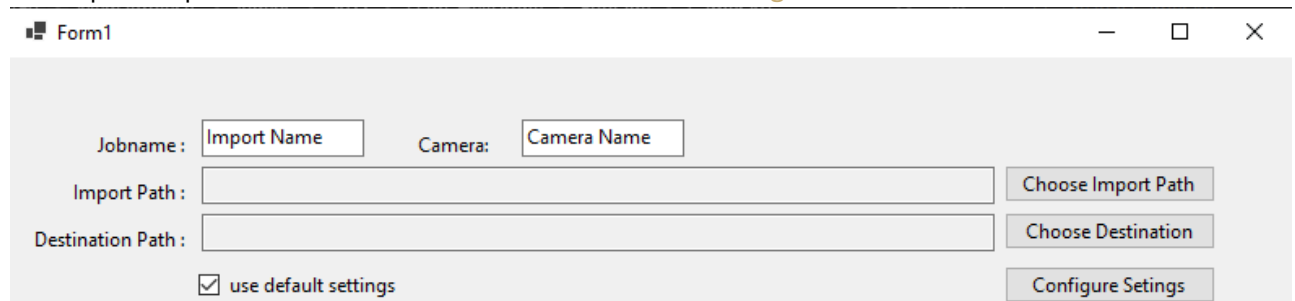

#### 5. The Program has been set up

## Usage

Set your **Jobname** to the name of the import job, this will be the name of the top-level folder. Set **Camera** to what Camera you are importing, eg: GOPRO, or Filmcamera1

## Quick Import

1. For a quick import click the checkmark **use default settings**

2. Press **Choose Import Path** to the selected Location you want to import
3. Press **Start Import** button and it will copy files to the configured default Path

## Custom Import

1. For a custom Import make sure **use default settings** is unchecked.
2. Press **Choose Import Path** to the selected Location you want to import

3. Press **Choos Destination** to select where your files need to go
4. Tick **create Project** to copy the selected Premier file for workflow
5. Press **Start Import** button and it will copy files to the selected directory

## Notes

- Program needs to be restarted for fresh import (it will close after accepting complete import message anyway)
- To add a 2nd camera to the Import-Job just relaunch the Programm and enter the same Jobname

## Changes

### 1.3

Introducing the main Program with basic functionality

### 1.4

Improved Configure

- Added ability to copy from Premiere Project

## About

IMPORTING MADE EASY

WImporter V 1.3
